

## Signals & Telegraph

The Signals & Telegraph Department (“S&T”) is responsible for the maintenance of the railway’s point control mechanisms and signals. The department is also responsible for commissioning new signalling equipment. In addition to the mechanical systems, lever frames etc. It’s also responsible for the internal “omnibus” phone circuit and the safety critical electrical single line systems.

It’s like an outdoor gym, but with something practical to show for your effort! Alternatively, if you are more electrically or electronically minded, we could use you to help with the electrical interlocking and phones.

If you are interested in volunteering in S&T contact-
